

OpticalSwitch

Library version: RENAT 0.1.8g
Library scope: test suite
Named arguments: supported

Introduction

A library provides control for L1 Optical Switch

Unlike other device, there is no *Switch* keywork with optical switch. Usually user only need to care about the interfaces not the ports of the switches.

Shortcuts

Add · **Clear By File** · **Close All** · **Connect All** · **Delete** · **Get Connection Info** · **Load From File** · **Save To File**

Keywords

| Keyword | Arguments | Documentation |
|---------------------|---|---|
| Add | dev1, intf1, dev2, intf2, direction=bi, force=False | Adds a connection. See details in each module help |
| Clear By File | file_name=, comment=# | Clears all x-connections defined in the connection file Default connection file is defined in optic/connection of config/local.yaml |
| Close All | | Close all connections |
| Connect All | | Connect to all L1 switch and read all necessary information |
| Delete | dev1, intf1, dev2, intf2, direction=bi, force=False | Deletes a connection. See details in each module help |
| Get Connection Info | dev, intf | Returns connection information. See details in each module help. |
| Load From File | file_name=, force=True, comment=# | Loads the connection file and set the connections filename is the name of the connection file under the current config folder. If filename is empty, the value of optic/connection from config/local.yaml will be used. The connection file supports jinja2 template language. Besides, # is the default comment char which could be changed The format of connection file follows: ▪ each connection is described by 1 line ▪ source and destination are separated by ` - or > , which mean `bidirection or unidirection (unidirection connects source tx to dest rx) Connection file sample: device1:port1 - device2:port2 device1:port3 > device2:port Examples: OpticalSwitch.Load From File OpticalSwitch.Load From File save1.conn |
| Save To File | file_name | Saves the current connection of all devices in this test. By default, all interfaces of the devices are save. If a connection file is given, only interfaces specified in the connection file are saved Examples: OpticalSwitch.Save To File save1.conn |

Altogether 8 keywords.
