

OpticalSwitch

Library version: RENAT 0.1.8
Library scope: test suite
Named arguments: supported

Introduction

A library provides control for L1 Optical Switch

Unlike other device, there is no *Switch* keyword with optical switch. Usually user only need to care about the interfaces not the ports of the switches.

Shortcuts

Add · **Clear By File** · **Close All** · **Connect All** · **Delete** · **Get Connection Info** · **Load From File** · **Save To File**

Keywords

| Keyword | Arguments | Documentation | | | | | | |
|-----------------------------|--|---|-----------------------------|---|-------------------------|-----------------------------|---|-------------------------|
| Add | <i>dev1, intf1, dev2, intf2, direction=bi, force=False</i> | Adds a connection. See details in each module help | | | | | | |
| Clear By File | <i>file_name=, comment=#</i> | Clears all x-connections defined in the <i>connection file</i> Default <i>connection file</i> is defined in <code>optic/connection</code> of <code>config/local.yaml</code> | | | | | | |
| Close All | | Close all connections | | | | | | |
| Connect All | | Connect to all L1 switch and read all necessary information | | | | | | |
| Delete | <i>dev1, intf1, dev2, intf2, direction=bi, force=False</i> | Deletes a connection. See details in each module help | | | | | | |
| Get Connection Info | <i>dev, intf</i> | Returns connection information. See details in each module help. | | | | | | |
| Load From File | <i>file_name=, force=True, comment=#</i> | Loads the connection file and set the connections <code>filename</code> is the name of the connection file under the current config folder. If <code>filename</code> is empty, the value of <code>optic/connection</code> from <code>config/local.yaml</code> will be used. The <code>connection file</code> supports <code>jinja2</code> template language. Besides, <code>#</code> is the default comment char which could be changed The format of <code>connection file</code> follows: <ul style="list-style-type: none">■ each connection is described by 1 line■ <code>source</code> and <code>destination</code> are separated by <code>` - or > </code>, which mean <code>`bidirection</code> or <code>unidirection</code> (unidirection connects <code>source tx</code> to <code>dest rx</code>) Connection file sample: <pre>device1:port1 - device2:port2 device1:port3 > device2:port</pre> Examples: <table><tr><td><code>OpticalSwitch.</code></td><td><code>Load From File</code></td><td></td></tr><tr><td><code>OpticalSwitch.</code></td><td><code>Load From File</code></td><td><code>save1.conn</code></td></tr></table> | <code>OpticalSwitch.</code> | <code>Load From File</code> | | <code>OpticalSwitch.</code> | <code>Load From File</code> | <code>save1.conn</code> |
| <code>OpticalSwitch.</code> | <code>Load From File</code> | | | | | | | |
| <code>OpticalSwitch.</code> | <code>Load From File</code> | <code>save1.conn</code> | | | | | | |
| Save To File | <i>file_name</i> | Saves the current connection of all devices in this test. By default, all interfaces of the devices are save. If a connection file is given, only interfaces specified in the connection file are saved Examples: <table><tr><td><code>OpticalSwitch.</code></td><td><code>Save To File</code></td><td><code>save1.conn</code></td></tr></table> | <code>OpticalSwitch.</code> | <code>Save To File</code> | <code>save1.conn</code> | | | |
| <code>OpticalSwitch.</code> | <code>Save To File</code> | <code>save1.conn</code> | | | | | | |

Altogether 8 keywords.
