## Samurai

Library version: RENAT 0.1.10
Library scope: test suite
Named arguments: supported

## Introduction

A library provides functions to control Samurai application

The library utilize SeleniumLibrary and adds more functions to control Samurai application easily. Without other furthur mentions, all of the concepts of user, user group are Samurai concepts. By default, RENAT will try to connec to all Samurai nodes defined in active local.yaml at the beginning of the test and disconnect from them at the end of the test automatically. Usually user does not need to use Connect All and Close explicitly.

Currently, this module supposed that Samurai is used in Japanese locale. When Samurai module has error, it tried to make the last snapshot in result/selenium-screenshot-x.png. Checking this capture will help to understand the reason of the error.

Currently the module support Samurai 09/14/16

Some keywords of Samurai is using xpath to identify elements. See Selenium2Library for more details about xpath.

See WebApp for common keywords of web applications and how to configure the local.yaml file.

Selenium2Library keywords still could be used together within this library. See Selenium2Library for more details.
